(Name and telephone number, including area code, of the person to contact in connection with this report.)

Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

- Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period January 1 to December 31, 2015.

Section 1 – Conflict Minerals Disclosure

Item 1.01 Conflict Minerals Disclosure and Report

Best Buy Co., Inc. has issued a Conflict Minerals Report for the period from January 1, 2015 to December 31, 2015. A copy of the Conflict Minerals Report is filed herewith as Exhibit 1.01 and is available at www.investors.bestbuy.com under the "SEC Filings" link.

Item 1.02 Exhibit

A copy of the Conflict Minerals Report required by Item 1.01 is filed as Exhibit 1.01 hereto.

Section 2 – Exhibits

Item 2.01 Exhibits

The following Exhibit 1.01 is filed as part of this Specialized Disclosure Report on Form SD.

<u>Exhibit No.</u>	<u>Description of Exhibit</u>
1.01	Conflict Minerals Report for the reporting period January 1, 2015 to December 31, 2015 as required by Items 1.01 and 1.02 of this Form.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned hereunto duly authorized.

BEST BUY CO., INC.
(Registrant)

Date: May 31, 2016

By: /s/ KEITH J. NELSEN
Keith J. Nelsen
General Counsel and Secretary

Best Buy Co., Inc.
Conflict Minerals Report
For The Year Ended December 31, 2015

This Conflict Minerals Report for Best Buy Co., Inc. ("Best Buy", "we", "us" or "our") covers the reporting period from January 1st to December 31st, 2015, and is presented in accordance with the Securities Exchange Act of 1934, Rule 13p-1 (the "conflict minerals law").

This Conflict Minerals Report is filed as Exhibit 1.01 to our Specialized Disclosure Report on Form SD and is also posted on our website at www.investors.bestbuy.com.

Introduction

The Democratic Republic of the Congo ("DRC") and its adjoining countries have reserves of tin, tantalum, tungsten and gold (collectively known as "3TG"), all of which are commonly used in the manufacturing of many consumer products. Occasionally, these minerals are illegally sourced and traded in the eastern DRC and surrounding areas by armed groups who are responsible for human rights violations. As such, these minerals are known as "conflict minerals."

In 2010, the United States enacted the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Act"). Section 1502 of the Act specifically relates to conflict minerals and requires companies covered under the Act to annually file a Form SD with the United States Securities and Exchange Commission ("SEC") to disclose whether the 3TG used in their products directly or indirectly benefited armed groups in the DRC. This Conflict Minerals Report, which is an exhibit to our Specialized Disclosure Report on Form SD, describes the design of our conflict minerals program and provides an account of how our program was implemented in 2015 to determine, to the best of our ability, the source, chain of custody and facilities used to process the minerals used in Best Buy Exclusive Brands ("ExB") products.

Historically, we have had very limited engagement with parties beyond the first-tier suppliers in our ExB supply chain. Consequently, identifying, with certainty, the smelters, refiners and recyclers and the source of the materials they process is a significant challenge. We seek to address this challenge by participating in and, in some cases, leading collaborative industry efforts that seek to gather accurate data about the sources of 3TG, requiring smelters to be validated as conflict-free and ensure a supply chain in which human rights abuses do not exist.

Products

Best Buy is a leading provider of technology products, services and solutions. We offer these products and services to the customers who visit our stores, engage with Geek Squad agents or use our websites or mobile applications. We have operations in the U.S., Canada and Mexico.

The ExB product categories, under brand names Insignia, Dynex, Rocketfish, Platinum and Modal, in which we believe contain necessary 3TG and are therefore within scope of our RCOI and due diligence efforts include the following:

Product Category	Examples
Audio Products and Accessories	Stereos, speakers, sound bars, radio, etc.
Computing and Accessories	Tablets, monitors, keyboards, mouse, chargers, etc.
Mobile Phone Accessories	Mobile chargers, cables, etc.
Office and Household Products	Shredders, coffee makers, toasters, blenders, etc.
Video Game Accessories	Charging stations, power packs, steering wheel combo, etc.
Video Products and Accessories	TVs, DVD players, video cables, etc.

Reasonable Country of Origin Inquiry

Pursuant to the conflicts minerals law, we conducted a Reasonable Country of Origin Inquiry ("RCOI") on the source of 3TG necessary to the functionality and/or production ("necessary 3TG") of our ExB products in order to determine whether any of the necessary 3TG originated in the DRC or an adjoining country or were from recycled or scrap sources. As part of our RCOI process, we did the following:

- Through a review of past Conflict Minerals Reporting Templates ("CMRTs"), utilization of a 3TG risk assessment tool and consultation with our engineering team, we identified 84 active, first-tier suppliers we knew or had reason to believe used necessary 3TG in the production of ExB products ("relevant suppliers");
- Used the CMRT created by the Electronics Industry Citizenship Coalition and the Global e-Sustainability Initiative to survey relevant suppliers, requesting country of origin information and the identification of the facilities that processed necessary 3TG they utilized;
- Reviewed information provided by the 84 relevant suppliers to determine the completeness and reasonableness of their responses and verified the processing facilities they identified by comparing against the list of known smelters and refiners as provided by the Conflict Free Sourcing Initiative ("CFSI");
- Reviewed country of origin information available to Best Buy through our membership in CFSI (member ID V1720151223); and
- Conducted additional research on the 3TG processing facilities identified by relevant suppliers in an attempt to augment the country of origin information gathered through our membership in CFSI.

Based on the results of our RCOI, we had reason to believe that some of the necessary 3TG used in ExB products may have been processed by facilities that sourced from the DRC or an adjoining country and may not have been from recycled or scrap sources. In compliance with the Act, we then exercised due diligence on the source and chain of custody of the necessary 3TG processed by these facilities that conformed to an internationally recognized due diligence framework.

Due Diligence

To determine to the best of our ability the source and chain of custody of the necessary 3TG used in ExB products, we conducted due diligence on our supply chain. Our due diligence measures were developed to ascertain if the minerals originated from the DRC or an adjoining country and, if so, whether armed groups directly or indirectly benefited as a result.

Design of our Due Diligence Measures

Our due diligence process is designed to conform, in all material aspects given our downstream position in the supply chain, to the Organisation for Economic Co-operation and Development Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, Second Edition and the related supplements on Tin, Tantalum, Tungsten and Gold (collectively, the "OECD Guidance"), an internationally recognized due diligence framework. In accordance with the 5-step OECD Guidance, the design of our due diligence includes, but is not limited to, the following:

1. **Establishing a strong company management system** through the adoption of a Conflict Minerals Policy, the implementation of a conflict minerals governance structure and strengthened engagement with our suppliers.
2. **Identifying and assessing risks** by identifying relevant suppliers to engage in our RCOI and due diligence efforts, determining a reasonable engagement approach to gather conflict mineral sourcing information, and reviewing and validating smelter information provided by suppliers.
3. **Responding to identified risks** by reporting to senior management the findings derived from our RCOI and due diligence efforts, designing training for relevant suppliers to improve their systems of transparency and control and devising a risk management strategy that seeks to ensure necessary 3TG in the ExB supply chain are conflict free.
4. **Auditing supply chain due diligence** via our support for an industry developed audit program that is administered by independent, third-party auditors.
5. **Reporting on due diligence** through our Specialized Disclosure Report on Form SD and Conflict Minerals Report filed with the SEC and the inclusion of conflict minerals content in our annual Corporate Responsibility and Sustainability report.

Due Diligence Measures Performed

We are working with electronics industry and retail peers in an effort to ensure that the implementation of our due diligence process is aligned with the OECD Guidance and complementary to the industry approach. The primary objective of this alignment is to maximize the efficiency and effectiveness of our efforts to identify relevant smelters and refiners and encourage their participation in the CFSI's Conflict-Free Smelter Program ("CFSP") or an equivalent program. For this reporting period, we exercised the due diligence measures described below on the source and chain of custody of necessary 3TG in the ExB supply chain:

- We published a Conflict Minerals Policy that established ExB commitments regarding the sourcing of conflict minerals, including alignment with the OECD Guidance, supporting industry efforts, and seeking to avoid sourcing necessary 3TG that directly or indirectly benefit armed groups. The policy also sets similar expectations for our ExB suppliers, which we reviewed if we conducted a social compliance audit at the supplier’s factory;
- We maintained a conflict minerals governance structure comprised of an operations team, an advisory team and an executive committee that includes senior executives from our Legal, Financial Reporting, Communications, Public Affairs, Corporate Responsibility & Sustainability and Global Sourcing departments;
- We strengthened the engagement with relevant ExB suppliers by providing training regarding the Conflict Minerals law and their role in supporting our RCOI and due diligence efforts., as set forth below:

Conflict Mineral Program Key Performance Indicators	
Percent of relevant ExB suppliers who attended training (in-person or via a webinar)	91%
Percent of relevant ExB suppliers who received training material	100%
Percent of products containing necessary 3TG that have had their supply chains surveyed	100%
Percent of relevant ExB suppliers who returned a CMRT	100%

- We reviewed the data collected via our RCOI and due diligence efforts to determine if smelters in our supply chain may have been sourcing from a covered country and directly or indirectly financed or benefited armed groups in the DRC or an adjoining country;
- We conducted outreach to smelters and refiners who had not been validated as “conflict-free” via CFSP or other independent third-party audit scheme to encourage their participation in such a program;
- We held more than 20 meetings with non-validated smelters and refiners to assess their sourcing practices and request country of origin information;
- We served as a single-point-of-contact to support smelters and refiners prepare for a CFSP audit and complete corrective action plans post-audit, as needed;
- We contributed to the development and implementation of an effective smelter audit program through our membership in the CFSI, which administers Conflict Free Smelter Program audits;
- We supported many CFSI activities including serving as the Chair of the Smelter Engagement Team (“SET”), which confirms eligible smelters and conducts coordinated outreach to known smelters to encourage them to participate in the CFSP or an equivalent program. Best Buy was also the co-lead of the China SET, which conducted outreach to smelters and refiners based in China; and
- We disclosed information regarding our due diligence on conflict mineral sourcing via our Specialized Disclosure Report on Form SD and this Exhibit 1.01 Conflict Minerals Report filed with the SEC and we will include information on our conflict minerals due diligence efforts in our fiscal 2016 Corporate Responsibility and Sustainability Report, which we plan to release in the summer of 2016.

Results of Due Diligence Performed

We conducted the due diligence process described above in order to ascertain source and chain of custody information for the necessary 3TG in our ExB supply chain. To date, nearly 85% of the processing facilities reported by relevant ExB suppliers have been validated as conflict-free via an independent, 3rd party audit or they have committed to go through an audit. Nevertheless, based on our due diligence process and the subsequent information we gathered, we are unable to determine the origin of all the 3TG used in our products and whether armed groups directly or indirectly benefited primarily due to the lack of transparency among smelters who have not yet been audited. While there have been improvements in the systems of transparency and control for the sourcing of necessary 3TG, these results are not unexpected, especially given our downstream position as a retailer and manufacturer of ExB products.

Of the smelter and refiner information provided by our suppliers, we identified 23 in which we had reason to believe that the 3TG they processed may have originated in the DRC or an adjoining country and may not have been from recycled or scrap sources. All 23 of these processing facilities have been validated as conflict-free through CFSI or another independent, third-party audit scheme. Furthermore, we have not identified a supplier, smelter or refiner which we have reason to believe may be sourcing from the DRC or an adjoining country and, directly or indirectly, benefiting armed groups.

Please see below for the status of facilities reported to us by relevant ExB suppliers and see Attachment A for the list of smelters and refiners.

Metal	Validated ⁽²⁾	Active or TI-CMC Member ⁽²⁾	Unknown ⁽²⁾
Gold	71%	8%	21%
Tantalum	100%	0	0
Tin	68%	14%	18%
Tungsten	76%	21%	3%

Future Steps to Optimize Our Due Diligence Efforts

Best Buy is committed to being a socially and environmentally responsible corporation and this commitment extends throughout the length of our value chain, from the sourcing of raw material to the responsible recycling of products. We recognize that this commitment is a journey and one that we cannot take on our own. This challenge is further complicated given the complexity of our supply chain, which is, in essence, in a constant state of transformation. As a result, we will continue to focus our efforts on collaborating with both the retail and consumer electronic industries to improve the systems of transparency and control in our supply chain. We will also continue our engagement with relevant suppliers in order to build their knowledge so they are able to provide more complete and accurate information on the source of conflict minerals in our ExB supply chain and, furthermore, to impress upon them our expectation that they also apply the OECD Guidance in good faith.

Steps we intend to take in 2016 include:

- Participating in CFSI meetings in order to gather best practices and collaborate with industry peers;
- Providing training for relevant ExB suppliers on conflict mineral reporting and the OECD Guidance;
- Seeking to optimize the CFSI's Smelter Engagement Team structure, process and tools in order to improve the program's effectiveness; and
- Continuing to serve as a single-point-of-contact to support smelters who have expressed an interest in completing a CFSP audit.

Attachment A

The vast majority of the CMRT responses we received from suppliers provided data at a company level, meaning they listed the names of smelters and refiners they believe supplied 3TG for all the products they produced, not just the products they produced for Best Buy. **Therefore, the processing facilities listed in the table below represent the smelters and refiners provided by our suppliers, but we do not have sufficient information to confirm whether these are the actual smelters that processed necessary 3TG used in our products.** Additionally, we are unable to conclusively determine the country of origin information for our necessary 3TG but based on the data gathered from suppliers, processing facilities and CFSI, we believe that the sources may include the countries listed in the last row of the table below.
