

Best Buy North America Carbon and Energy Corporate Statement

The commitment of Best Buy to reduce carbon emissions aligns with global interests in addressing climate change. We seek to positively impact the economic, environmental and societal well-being of the planet by:

- Addressing our carbon emissions and taking efforts to reduce energy and fuel consumption within our retail operations
- Helping consumers to choose energy-efficient products and solutions to help them save money and minimize their own emissions
- Working with supply chain partners to identify and reduce carbon emissions relating to the design, manufacture, transport, in-use phase and end of life of their products
- Continuing to assess risks and opportunities associated with climate change and create meaningful programs and processes to address findings
- Setting public goals and supporting voluntary efforts to disclose emissions in a complete and transparent way
- Minimizing future emissions through better building design and renewable energy sources
