(Zip Code)

Todd G. Hartman
(612) 291-1000

(Name and telephone number, including area code, of the person to contact in connection with this report.)

Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

- Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period January 1 to December 31, 2020.
-

Section 1 – Conflict Minerals Disclosure

Item 1.01 Conflict Minerals Disclosure and Report

Best Buy Co., Inc. has issued a Conflict Minerals Disclosure for the period from January 1, 2020, to December 31, 2020. A copy of the Conflict Minerals Disclosure is filed herewith as Exhibit 1.01 and is available at www.investors.bestbuy.com under the "SEC Filings" link.

Item 1.02 Exhibit

A copy of the Conflict Minerals Report required by Item 1.01 is filed as Exhibit 1.01 hereto.

Section 2 – Exhibits

Item 2.01 Exhibits

The following Exhibit 1.01 is filed as part of this Specialized Disclosure Report on Form SD.

Exhibit No.	Description of Exhibit
1.01	Conflict Minerals Report for the reporting period January 1, 2020, to December 31, 2020 as required by Items 1.01 and 1.02 of this Form.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned hereunto duly authorized.

BEST BUY CO., INC.
(Registrant)

Date: May 27, 2021

Executive Vice President, General Counsel, Chief Risk
Officer and Secretary

Best Buy Co., Inc.
Conflict Minerals Report
For The Year Ended December 31, 2020

This Conflict Minerals Report for Best Buy Co., Inc. (“Best Buy”, “we”, “us” or “our”) covers the reporting period from January 1, 2020 to December 31, 2020, and is presented in accordance with the Securities Exchange Act of 1934, Rule 13p-1 (the “conflict minerals law”).

This Report describes the design of our 2020 conflict minerals program and provides an account of how due diligence was applied to determine, to the best of our ability, the source, chain of custody and facilities used to process certain minerals used in Best Buy’s private label products in order to verify that no non-state armed groups in the Democratic Republic of the Congo (“DRC”) or an adjoining country (“covered country”) directly or indirectly benefitted. It is filed as Exhibit 1.01 to our Specialized Disclosure Report on Form SD and both documents are posted on our website at www.investors.bestbuy.com.

Overview of our Responsible Sourcing Program

Best Buy is committed to respecting human rights and the responsible sourcing of our private label products. We seek to ensure this commitment is fulfilled by engaging our direct suppliers and the smelters and refiners reported to be in our supply chain and, wherever possible, we further embed our commitment through contractual and policy requirements, including a supplier code of conduct that sets specific standards related to labor, health and safety, environmental practices, management systems and ethics, and includes provisions directly relating to the responsible sourcing of raw materials.

We recognize the immense complexity of globalized supply chains requires a collaborative approach to address shared challenges. To that end, Best Buy has a long history of engaging industry peers to develop, share and implement best practices that seek to mitigate supply chain risks. In 2018, Best Buy served as the chair of the Responsible Minerals Initiative (“RMI”), an organization whose mission is to provide its more than 400 members with tools and resources to make responsible sourcing decisions. In addition, we served as the chair of the RMI Smelter Engagement Team (“SET”) (2014-present) and the co-chair of the China SET (2016-present) to help guide outreach to smelters and refiners to better understand their sourcing practices and encourage their participation in a third-party audit program. We continue to be a regular contributor to RMI’s Initial Audit Fund and Upstream Due Diligence Fund to support improved due diligence, including in-region monitoring and traceability efforts.

In 2020, we engaged 82 of our private label suppliers to conduct due diligence on the responsible sourcing of raw materials. The 82 suppliers collectively reported 304 tin, tungsten, tantalum, and gold facilities that may have processed the metals that were necessary to the functionality and/or production of our private label products. Of the 304 reported facilities, more than 82% have successfully completed a third-party audit that assessed their responsible sourcing policies and practices, or they are in the process of completing a third-party audit. For those facilities that had not committed to an audit, we conducted outreach to encourage their participation in an audit program or we requested their removal from our supply chain. While there are limitations to our program, such as having no contractual relationship with any smelters or refiners and having to rely on the information provided by several tiers of the supply chain which is challenging to verify, we are unable to confirm that any of the smelters and refiners reported to be in our supply chain sourced from mines that directly or indirectly financed or benefitted non-state armed groups in the DRC or an adjoining country.

Products

Best Buy is driven by its purpose to enrich lives through technology. We do this by leveraging our combination of tech and a human touch to meet our customers’ everyday needs, whether they come to us online, visit our stores or invite us into their homes. In 2020, we had operations in the U.S., Canada and Mexico.

We sell private label product categories, under brand names *Insignia, Dynex, Rocketfish, Platinum and Modal*, collectively known as Exclusive Brands (“ExB”), in which we believe contain tin, tungsten, tantalum and/or gold and are therefore within scope of our Reasonable Country of Origin Inquiry (“RCOI”) and due diligence efforts include the following:

Product Category	Product Examples
Consumer Electronics	TVs, speakers, DVD players, sound bars, radio, etc.
Computing and Mobile Phones	Tablets, monitors, keyboards, mice, cables, chargers, etc.
Appliances	Shredders, coffee makers, toasters, blenders, etc.
Entertainment	Charging stations, power packs, steering wheel combo, etc.

Reasonable Country of Origin Inquiry

The DRC and its adjoining countries have massive reserves of tin, tantalum, tungsten and gold (collectively known as “3TG”), all of which are commonly used in the manufacturing of many consumer products. Occasionally, these minerals are illegally mined, transported, taxed and/or traded in the eastern DRC and surrounding areas by armed groups who use funds derived from these activities to fuel violence and commit human rights violations. As such, these minerals, regardless of where they are mined, are known as “conflict minerals.”

Pursuant to the conflict minerals law, we conducted a RCOI on the source of 3TG necessary to the functionality and/or production of our products (“necessary 3TG”) to determine whether any of the necessary 3TG originated in the DRC and its adjoining countries or were from recycled or scrap sources. As part of our RCOI process, we conducted the following activities:

- Reviewed past Minerals Reporting Templates (“MRTs”), utilized a 3TG risk assessment tool and consulted with our engineering team to identify 82 active, first-tier suppliers we knew or had reason to believe used necessary 3TG in the production of ExB products (“relevant suppliers”);
- Used the MRT created by the RMI to survey relevant suppliers, requesting the names of the facilities that processed the necessary 3TG they utilized and the country of origin from which the ores (i.e., unrefined minerals) were sourced;
- Reviewed information provided by the 82 relevant suppliers to determine the completeness and reasonableness of their responses and verified the processing facilities they identified by comparing against the list of known smelters and refiners as provided by RMI;
- Reviewed country of origin information available to Best Buy through our membership in RMI (member ID V1720151223); and
- Conducted additional research on the 3TG processing facilities identified by relevant suppliers, including direct contact and reviewing reports from media, government and civil society organizations, to augment the country of origin information gathered through MRTs and our membership in RMI.

Based on the results of our RCOI, we had reason to believe that some of the necessary 3TG used in ExB products may have been processed by facilities that sourced from the DRC or an adjoining country and may not have been from recycled or scrap sources. In compliance with the conflict minerals law, we then exercised due diligence on the source and chain of custody of the necessary 3TG processed by these facilities that conformed to an internationally recognized due diligence framework.

Due Diligence

To determine, to the best of our ability, the source and chain of custody of the necessary 3TG used in ExB products, we conducted due diligence on our supply chain. Our due diligence measures were developed to ascertain if the minerals originated from the DRC or an adjoining country and, if so, whether armed groups directly or indirectly benefited as a result. Additional measures were designed to mitigate risks identified through the implementation of our due diligence process.

Design of our Due Diligence Measures

Our due diligence process is designed to conform, in all material aspects given our downstream position in the supply chain, to the *Organisation for Economic Co-operation and Development Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, Third Edition* and the related supplements on tin, tantalum, tungsten and gold (collectively, the “OECD Guidance”), an internationally recognized due diligence framework. In accordance with the OECD Guidance, the design of our due diligence includes, but is not limited to, the following:

1. **Maintaining a strong company management system** through the adoption of a Conflict Minerals Policy, the implementation of a conflict minerals governance structure, applying supply chain controls and strengthened engagement with our suppliers.
2. **Identifying and assessing risks** by identifying relevant suppliers to engage in our RCOI and due diligence efforts, determining a reasonable engagement approach to identify smelters and refiners in our supply chain and assess their sourcing practices, and reviewing and validating smelter information provided by suppliers to determine risks.
3. **Responding to identified risks** by reporting to senior management the findings derived from our RCOI and due diligence efforts, designing training for relevant suppliers to improve their systems of transparency and control, and devising and implementing a risk mitigation strategy that seeks to ensure necessary 3TG in the supply chain are conflict-free.
4. **Supporting independent, third-party audits of smelters and refiners’ due diligence** via our membership in and financial support of an industry association that developed a third-party audit program.
5. **Reporting on due diligence** through our Specialized Disclosure and Conflict Minerals Report filed with the SEC and the inclusion of conflict minerals content in our annual Environmental, Social and Governance (ESG) report.

Due Diligence Measures Performed

We worked with RMI and industry peers to ensure the implementation of our company’s due diligence process was aligned with the OECD Guidance and complemented and amplified the industry’s approach. The primary objective of this alignment was to maximize the efficiency and effectiveness of our efforts to identify smelters and refiners and encourage their participation in RMI’s Responsible Minerals Assurance Process (“RMAP”) or an equivalent program, including the London Bullion Market Association’s (“LBMA”) Good Delivery program and the Responsible Jewellery Council’s (“RJC”) Chain of Custody program. For this reporting period, we performed the due diligence measures described below, many of which go beyond compliance, on the source and chain of custody of necessary 3TG in the ExB supply chain that we knew or had reason to believe originated from the DRC or Covered Countries and may not have been from recycled or scrap sources:

OECD Guidance Step 1: **Maintaining a strong company management system**

- We maintained a Conflict Minerals Policy (“Policy”) that specifically requires our suppliers to utilize smelters and refiners (“SORs”) who have successfully completed a third-party audit of their due diligence practices;
 - The Policy, communicated to all ExB suppliers, also requires suppliers to have a conflict minerals policy, provide an annual MRT that identifies the SORs in their supply chain, and apply relevant aspects of the OECD Guidance to their sourcing practices. These requirements were assessed and reinforced when we conducted social compliance audits at supplier factories;
 - Our Policy expectations were further reinforced through our supplier code of conduct and contract language that obliges our suppliers to meet Policy requirements;
-

- We maintained a conflict minerals governance structure comprised of an operations team and an executive committee that included the department heads from Legal, External Reporting, Corporate Responsibility, Exclusive Brands, Government Affairs, Supply Chain, Category Management and Communications and Public Affairs as well as a senior executive from Human Resources. The program is ultimately managed by our Chief Communications and Public Affairs Officer;
- We further strengthened our engagement with relevant ExB suppliers by providing training regarding the conflict minerals law, our policy requirements, and their role in supporting our RCOI and due diligence efforts; and
- We tracked our program performance across a set of Key Performance Indicators (“KPIs”) as detailed in the table below:

Conflict Mineral Program KPIs	
Percent of relevant ExB suppliers who received training material	100%
Percent of products containing necessary 3TG that have had their supply chains surveyed	100%
Percent of relevant ExB suppliers who returned a MRT	99%
Percent of relevant ExB supplier who have a conflict minerals policy	94%

OECD Guidance Step 2: Identifying and assessing risks

- We surveyed relevant suppliers, via RMI’s Minerals Reporting Template, twice in 2020 to identify the SORs in the ExB supply chain. We required MRTs be completed at a product level from more than 58% of relevant suppliers in 2020, resulting in more accurate data;
- We reviewed data collected via our RCOI and due diligence efforts to determine if smelters in our supply chain may have been sourcing from a Covered Country and potentially directly or indirectly financed or benefited armed groups in the DRC or an adjoining country;
- We conducted outreach to smelters and refiners who had not been audited to determine their level of conformance to the RMI standard or another independent third-party standard and to encourage their participation in such a program;
- We directly engaged 10 smelters and refiners to assess their sourcing practices, request country of origin information and/or to better understand the challenges they face to demonstrate their alignment with the OECD Guidance via a third-party audit;
- We further assessed the level of risk posed by SORs reported to be in our supply chain via shared industry insights, media and other stakeholder reports, publicly available information, and the results of third-party audits, including audit programs from RMI, LBMA and RJC; and
- We also identified relevant suppliers that posed a risk of not complying with our contractual and policy requirements related to conflict minerals.

OECD Guidance Step 3: Responding to identified risks

- We engaged one factory that is responsible for reporting nearly all yet to be conformant smelters disclosed in this document to better understand their alignment with the OECD Guidance, discuss the steps they are taking to address yet to be conformant smelters reported to be in their supply chain, and make arrangements to have periodic check-ins to monitor their progress and offer our support
 - We reported the findings of our RCOI and due diligence measures, the subsequent risks identified, and the risk mitigation strategies to the Executive Human Rights Committee;
 - We designed, implemented, and monitored risk mitigation strategies for suppliers who did not comply with our Policy and SORs that had not successfully completed a third-party audit, including communications that reinforced our policy, providing additional training and support, and conducting audits which included corrective action plans;
 - We served as the chair of the RMI SET and served as the co-chair of the China SET. Both entities conducted coordinated outreach to known smelters to encourage them to participate in the RMAP or an equivalent program;
 - We helped smelters and refiners prepare for a RMAP audit and complete corrective action plans post-audit, as needed;
 - We monitored progress on SORs who implemented post-audit corrective action plans through our membership in RMI to ensure improvements were made and the audit successfully passed;
 - We took steps to disengage from 14 smelters in our supply chain who were assessed as high-risk due, in part, to their refusal to be transparent about their sourcing practices and locations; and
-

- We conducted 5 MRT validation audits, including 2 that were follow-up audits in which we engaged previously audited factories to further drive continuous improvement of their due diligence. These audits assess the due diligence capabilities of key ExB suppliers, determine their level of compliance with our contract and policy requirements, support better understanding of their alignment with the OECD Guidance, and build their due diligence capacity to improve sourcing practices and the quality of data received from suppliers.

OECD Guidance Step 4: **Supporting independent, third-party audits of smelter and refiners' due diligence**

- We contributed to the development and implementation of an effective smelter audit program through our membership in the RMI, which administers the Responsible Minerals Assurance Process audits;
- We made a financial donation to support due diligence in conflict-affected and high-risk regions
- We attended the virtual RMI conference to gather best practices and collaborate with industry peers.

OECD Guidance Step 5: **Reporting on due diligence**

- We disclosed information regarding our due diligence efforts on the sourcing of 3TG via our Specialized Disclosure and the Conflict Minerals Report filed with the SEC and we will include information on our conflict minerals due diligence efforts in our fiscal 2021 Environmental, Social and Governance Report, which we intend to release in the summer of 2021.

Results of Due Diligence Performed

We conducted the due diligence process described above to identify SORs and ascertain source and chain of custody information for the necessary 3TG in our ExB supply chain. In 2020, more than 82% of the processing facilities reported by relevant suppliers have been found conformant to the RMI, LBMA, or RJC standard via an independent, third-party audit or they have committed to go through an audit. Nevertheless, based on our due diligence process and the subsequent information we gathered, we are unable to determine the origin of all the 3TG used in our products and whether armed groups directly or indirectly benefited. This is primarily due to incomplete information from suppliers who were unable to identify all the SORs used in their supply chain, often because of unwilling or inept upstream actors in their supply chain, company level MRTs in which we are unable to discern which of the reported SORs processed the necessary 3TG in our products, and the lack of transparency among smelters who have not yet been audited, in particular, gold refiners. Further complicating our ability to determine the origin of all the necessary 3TG is our downstream position in which we have no contractual relationship with upstream actors.

The decrease in the percentage of conformant smelters in our private label supply chain from ~98% in 2019 to ~82% in 2020 is primarily attributable to a single factory. In response, we engaged the vendor and their factory to hold a series of calls to discuss our conflict minerals policy and program expectations. The vendor has their own conflict minerals program, which includes third-party support, and collectively a plan was developed to audit many of the factory's suppliers who reported non-conformant smelters and began the process of removing certain recalcitrant smelters from their supply chain. We remain engaged with this vendor and factory with regular calls to monitor their progress and offer our support and will do so until the non-conformant smelters have been audited or removed from the supply chain.

Of the 304 smelters and refiners provided by relevant ExB suppliers, we identified 46 for which we had reason to believe that at least a portion of the 3TG they processed may have originated in the DRC or an adjoining country and may not have been from recycled or scrap sources. All 46 of these processing facilities have been found conformant through RMAP or another independent, third-party audit program. Furthermore, we have not identified a supplier, smelter or refiner who we have reason to believe may be sourcing from the DRC or an adjoining country and directly or indirectly benefiting armed groups.

We are also aware that allegations, including violence perpetrated by security forces at source mines and ties to corrupt business entities in the sourcing of gold, have been leveled against a few of the smelters reported to be in our supply chain. We take these allegations seriously and we are monitoring third-party investigations and corrective

actions taken by these smelters. Based on the results of these efforts, we may take additional action, up to and including the removal of these smelters from our supply chain.

Please see the table below for the status of facilities reported to us by relevant ExB suppliers and see Attachment A for the list of smelters and refiners, their location and the countries from where they source, which is provided in aggregate by metal.

Metal	# of SORs	Conformant ⁽¹⁾	Active or TI-CMC Member ⁽¹⁾	Unknown ⁽¹⁾
Gold	153	71%	1%	28%
Tantalum	38	100%	0%	0%
Tin	72	76%	11%	13%
Tungsten	41	100%	0%	0%
Totals	304	80%	3%	17%

(1) Facility status is defined as the following:

Facility Status	Status Definition
Conformant	Facilities as of March 31, 2021 that conform with a third-party due diligence standard
Active or TI-CMC Member	Facilities that have committed to a RMAP audit or are participating in another independent third-party audit program
Unknown	Facilities for which we do not know to what degree they conform to the RMAP or another audit program's standard

Future Steps to Optimize Our Due Diligence Efforts

Best Buy is committed to be a socially and environmentally responsible corporation and this commitment extends throughout the length of our value chain, from the sourcing of raw material to the responsible recycling of products. We recognize that this commitment is a journey and one that we cannot take on our own. This challenge is exacerbated given the complexity of our supply chain, which is, in essence, in a constant state of flux. As a result, we will continue to focus our efforts on collaborating across industries to improve the systems of transparency and control in our supply chain. We will also continue our engagement with relevant suppliers to build their knowledge, so they are able to provide more complete and accurate information on the source of conflict minerals in our ExB supply chain and, furthermore, to impress upon them our expectation that they also apply the OECD Guidance in good faith.

Steps we intend to take in 2021 include:

- Enhance the system used to store our MRT results to improve data analysis and reporting; and
- Continue to conduct MRT Validation audits at key supplier and leverage the learnings from these audits to update our training material that is delivered to all relevant suppliers; and
- Continue to participate in RMI meetings to gather best practices and collaborate with industry peers.

Attachment A

Many of the MRT responses we received from relevant suppliers provided data at a company level, meaning they provided the names of smelters and refiners they believe supplied 3TG for all the products they produced, not just the products they produced for Best Buy. **Therefore, the processing facilities listed in the table below represent the smelters and refiners provided by our suppliers, but we do not have sufficient information to confirm whether these are the actual smelters that processed necessary 3TG used in our products.** Additionally, we are unable to conclusively determine the country of origin information for our necessary 3TG but based on the data gathered from suppliers, processing facilities, public information and RMI, we believe that the sources may include the countries listed in the table below.

<p>Country of origin for the mined and recycled gold processed by the facilities listed above may include: Andorra, Argentina, Armenia, Australia, Austria, Azerbaijan, Bahamas, Belgium, Benin, Bolivia (Plurinational State of), Botswana, Brunei, Bulgaria, Brazil, Burkina Faso, Cameroon, Canada, Cayman Islands, Chile, China, Columbia, Croatia, Cuba⁽³⁾, Cyprus, Czechia, Democratic Republic of the Congo, Denmark, Dominican Republic, Ecuador, Egypt, El Salvador, Eritrea, Estonia, Ethiopia, Fiji, Finland, France, French Guiana, Gambia, Georgia, Germany, Ghana, Greece, Guatemala, Guinea, Guyana, Honduras, Hong Kong, Hungary, Iceland, India, Indonesia, Iran⁽³⁾, Ireland, Israel, Italy, Ivory Coast, Japan, Jordan, Kazakhstan, Kenya, Kuwait, Kyrgyzstan, Laos, Latvia, Lebanon, Liberia, Liechtenstein, Lithuania, Luxembourg, Macau, Madagascar, Malaysia, Mali, Malta, Mauritania, Mauritius, Mexico, Monaco, Mongolia, Morocco, Mozambique, Namibia, Netherlands, New Caledonia, New Zealand, Nicaragua, Niger, Norway, Pakistan, Panama, Papua New Guinea, Paraguay, Peru, Philippines, Poland, Portugal, Puerto Rico, Romania, Russian Federation, Rwanda, San Marino, Saudi Arabia, Senegal, Serbia, Sierra Leone, Singapore, Slovakia, Slovenia, Solomon Islands, South Africa, South Korea, Spain, St. Vincent and Grenadines, Sudan, Suriname, Swaziland, Sweden, Switzerland, Taiwan, Tajikistan, Tanzania, Thailand, Togo, Trinidad and Tobago, Tunisia, Turkey, Uganda, Ukraine, United Arab Emirates, United Kingdom, United States of America, Uruguay, Uzbekistan, Venezuela, Vietnam, Zimbabwe, Zambia</p>
<p>Country of origin for the mined and recycled tantalum processed by the facilities listed above may include: Australia, Austria, Bolivia, Brazil, Burundi, Canada, China, Columbia, Democratic Republic of the Congo, Ethiopia, France, Germany, India, Indonesia, Ireland, Israel, Japan, Madagascar, Malaysia, Mozambique, Myanmar⁽³⁾, Namibia, Netherlands, Nigeria, Russian Federation, Rwanda, Sierra Leone, South Korea, Spain, Switzerland, Thailand, United Kingdom, Uganda, Zimbabwe</p>
<p>Country of origin for the mined and recycled tin processed by the facilities listed above may include: Angola, Argentina, Australia, Austria, Bangladesh, Belarus, Belgium, Benin, Bolivia, Brazil, Bulgaria, Burundi, Canada, Chile, China, Columbia, Croatia, Czechia, Cyprus, Democratic Republic of the Congo, Egypt, El Salvador, Estonia, Finland, France, Gabon, Germany, Ghana, Greece, Guinea, Hong Kong Hungary, India, Indonesia, Ireland, Israel, Italy, Japan, Jordan, Kazakhstan, Laos, Latvia, Lebanon, Libya, Lithuania, Luxembourg, Malaysia, Malta, Mexico, Mongolia, Morocco, Myanmar⁽³⁾, Netherlands, New Zealand, Nigeria, Norway, Pakistan, Peru, Poland, Portugal, Philippines, Puerto Rico, Qatar, Romania, Russian Federation, Rwanda, Saudi Arabia, Serbia, Senegal, Singapore, Slovenia, South Africa, South Korea, Spain, Sudan, Sweden, Switzerland, Taiwan, Tanzania, Thailand, Togo, Tunisia, Turkey, Ukraine, United Arab Emirates, United Kingdom, United States of America, Uganda, Venezuela, Vietnam, Yemen</p>
<p>Country of origin for the mined and recycled tungsten processed by the facilities listed above may include: Australia, Austria, Belgium, Bolivia, Brazil, Burundi, Canada, China, Columbia, Czechia, Democratic Republic of the Congo, France, Germany, Guinea, Hong Kong, Ireland, Israel, Indonesia, Japan, Kazakhstan, Laos, Latvia, Malaysia, Mexico, United Arab Emirates, Kingdom, United States of America, Uzbekistan, Vietnam, Zimbabwe</p>

- (1) Facility name and location as reported by the Responsible Minerals Initiative.
- (2) Facility status is defined as the following:

Facility Status	Status Definition
Conformant	Facilities as of March 31, 2021 that conform with a 3 rd party due diligence audit standard
Active	Facilities that have committed to a RMAP audit or are participating in another independent third-party audit program
Unknown	Facilities for which we do not know to what degree they conform to the RMAP or another audit program's standard

- (3) Raw ore from these countries was substantially transformed, outside of the United States, in a third country, by non-U.S. citizen, before being incorporated into finished products.
